

## HVC Color

### Composer Professional Version (MAC/WIN)

HVC Color Composer Professional Version (see our previous review at

[http://www.printerport.com/kdp/issues/old/v10n3.html#HVC%20Color%20Composer%20Professional%20\(MAC\)](http://www.printerport.com/kdp/issues/old/v10n3.html#HVC%20Color%20Composer%20Professional%20(MAC))) greatly extends InDesign's Color

Picker to provide an easy and efficient way in which to work in HVC color space, as well as the other supported color spaces in InDesign.

The Master Colors' technology empowers users to select a color and instantly generate \"smart palettes\" that display a range

of colors that are visually coherent with the selected color. Users can view HVC by the Hue, Value, or Chroma axis

and produce custom color palettes, selecting colors directly or saving the palettes as InDesign palette files. Palette

options support contrast measuring, split vertical sliders, and more. \$129.95
